

Plagiarism: Plagiarism involves using someone else's work, ideas, or words without proper acknowledgment or citation. This includes verbatim copying, paraphrasing without citation, and self-plagiarism (reusing one's own previously published work without proper attribution).

Fabrication and Falsification: Fabrication refers to the invention or manipulation of data, results, or research findings. Falsification involves the selective omission or alteration of data to misrepresent the truth. Both acts are serious breaches of research integrity and are unacceptable.

Duplicate Publication: Duplicate publication, also known as redundant or multiple publication, occurs when authors submit the same manuscript or significant parts of it to multiple journals without proper acknowledgment. This includes submitting manuscripts that overlap substantially with previously published work.

Authorship Misconduct: Authorship misconduct includes guest authorship (including individuals who have not made substantial contributions to the research) and ghost authorship (excluding individuals who have made significant contributions from the list of authors).

Ethical Violations: Ethical violations encompass any actions that violate ethical standards or guidelines for research involving human subjects, animals, or sensitive data. This includes failure to obtain appropriate ethical approval, informed consent, or disclosure of conflicts of interest.

Citation Manipulation: Citation manipulation involves artificially inflating citation counts by including irrelevant or false citations, or coercing authors to cite specific papers for the purpose of boosting their citation metrics.

Image Manipulation: Image manipulation includes the alteration or fabrication of images (e.g., figures, graphs, photographs) to misrepresent research findings. This includes digitally enhancing, modifying, or falsifying images without proper disclosure.

Breach of Confidentiality: Breach of confidentiality occurs when confidential information obtained during the peer review process is disclosed without authorization. This includes sharing manuscripts, reviewer identities, or confidential communications with third parties.
